

ZAIN KHAN

khanzainh@gmail.com | (408) 705-7856 | San Jose, CA

Professional Summary

AI Systems—focused software engineer and Data Science student with experience building agentic AI tools. Skilled in Retrieval-Augmented Generation (RAG), supervised fine-tuning, vector databases, and full-stack development.

Education

University of Washington — B.S. Informatics (Data Science), Senior

GPA: 3.5 | Dean's List | Coursework: Data Structures & Algorithms, AI/ML, Database Systems, Client-Side Development, Calculus

Technical Skills

Languages/Frameworks: Python, Java, SQL, JavaScript, React, Node.js, HTML/CSS

Tools: REST APIs, Docker, Ansible, Postman, GitHub/GitLab, R/RStudio

Core: Full-Stack Development, OOP, UI/UX Design, Predictive Modeling, Data Cleaning, AI/ML

Experience

Software Engineer Intern — AMD (Networking Technology & Solutions Group) | Jun 2025 – Sept 2025

- Built agentic AI systems for AI NIC cluster debugging using RAG and supervised fine-tuning.
- Developed end-to-end workflows for ReAct AI agents to validate reasoning and execution.
- Enhanced VectorDB Manager for multimodal knowledge ingestion (docs, GitHub, Jira).
- Delivered wireframes and UI prototypes for AIFM/PSM dashboards.

Technical Marketing Engineer Intern — Cisco Systems | Jun 2024 – Sept 2024

- Built demo application showcasing Nexus Dashboard with React and Node.js.
- Implemented pre-change analysis features to enhance network reliability.
- Automated configurations with Ansible and integrated REST APIs.

Software Engineer Intern — Cisco Systems | Aug 2023 – Sept 2023

- Enhanced UI of internal image repository using React.
- Collaborated in agile sprints and design reviews.

Projects

HomeLens — AI Home Valuation & Market Analysis Tool

- Built a full-stack AI home valuation tool using RAG and a fine-tuned pricing model to estimate fair value and deal quality.
- Engineered and merged Zillow housing datasets into clean, model-ready features and indexed market data for retrieval during inference.
- Implemented a Python backend and interactive frontend to deliver real-time property analysis with explainable outputs and no paid APIs.

Video Game Sales Analytics — Python

- Built regression model (MSE: 1.90) to forecast performance and analyze sales trends.
- Designed a color-coded feedback system and optimized game state management using sets and maps.
